

What to Expect

We are looking for a highly skilled and motivated Software Engineer to support our group by ensuring the success of key analytical dashboards and software applications leveraged by Tesla Global Supply Chain teams. You will be part of a team that is managing strategic initiatives and continuous improvement efforts across all of Tesla's Global Supply Chain Teams.

You will be responsible for building and maintaining full stack applications that support various use cases such as Supply Chain Management. Our UIs are built with React and are powered by PHP in the backend. We collaborate closely with our stakeholders, focus on extensible design systems, and obsess over open-source quality solutions to create scalable applications. We move quickly and aspire to always delight our users with wonderful interactions.

What You'll Do

- Contribute to the complete software development lifecycle for Supply Chain UI applications, ensuring that all projects are delivered on time and meet high-quality standards
- Design, develop, and maintain full stack web applications, utilizing React, PHP and Python and web tooling to create highly performant and scalable user experiences
- Implement rigorous testing strategies, including unit, integration, and end-to-end testing, to guarantee the reliability and performance of applications under various conditions
- Actively maintain and promote the core values of the team, which include engineering excellence, curiosity, a bias for action, self-awareness, inclusivity, and vulnerability, contributing to a positive and productive team culture
- Work closely with Product Manager and Engineering to figure out requirements and resolve problems

What You'll Bring

- Bachelor's Degree in Computer Science, Computer Engineering, Data Science or equivalent experience
- Supply Chain knowledge is preferred
- 4+ years of experience in web application design and development
- Experience in design, development and testing of web software applications, version control preferentially GIT, HTML and semantic markup, CSS responsive design
- Strong proficiency with JavaScript/ES6+

- Experience with >=PHP 8. ReactJS, TypeScript, Splunk, MySQL
- Experience with D3.js, AG-Grid, and other data visualization and analytic libraries
- In-depth knowledge of web fundamentals (HTTP, HTML, REST, JSON) And API development with emphasis on REST API's
- Experience with Docker and Kubernetes
- Expertise in building and maintaining CI/CD pipelines, as well as managing deployment infrastructure for web applications

Expected Compensation

\$140,000 - \$210,000/annual salary + cash and stock awards + benefits

Gelvesh

Education

University of California, Riverside

Master of Science in Computer Science

September 2024 - March 2026

GPA: 3.79/4.0

Dayananda Sagar College of Engineering

Bachelor of Engineering, Information Science & Engineering

May 2017 - June 2021

GPA: 3.88/4.0

Work Experience

Full Stack Software Engineer

LTIMindtree

August 2021 - August 2024

United States

- Delivered 12+ React and PHP 8 supply chain releases on time by owning the full software development lifecycle across UI, REST APIs, and MySQL data layers.
- Built a React 18 and TypeScript operations dashboard with AG-Grid tables and D3.js charts, cutting analyst case-review time by 50% across 6 REST API integrations.
- Migrated a legacy admin UI to a modular ReactJS SPA using Webpack code splitting and CSS responsive design, reducing page load by 60% and bundle size from 3.1MB to 870KB.
- Rebuilt monolithic endpoints into PHP and Node.js services with semantic HTTP and JSON contracts, boosting REST API throughput by 40% on high-traffic MySQL workflows.
- Scaled Jest, Supertest, and Cypress coverage to 92% across unit, integration, and end-to-end suites, cutting production bug rates by 35% and stabilizing release quality.
- Automated CI/CD pipelines in GitHub Actions and Jenkins with Docker and Kubernetes deploys, eliminating 70% of manual deployment effort through stage-gated approvals and rollback.
- Instrumented full-stack observability with Splunk dashboards, structured logging, and distributed tracing, reducing MTTR by 40% across React and backend services.
- Partnered with Product Managers and engineers on GIT-based OpenAPI reviews and mentored 3 junior developers, lifting sprint velocity by 20% over two quarters.

Software Engineer Intern

Yukthi Data Soft

August 2020 - October 2020

India

- Built REST APIs in JavaScript/ES6+ behind a React frontend and tuned MySQL stored procedures, dropping U.S. Bank Portal API response time from 300ms to 130ms.
- Migrated a legacy HTML/CSS and Oracle SQL app to a PHP and ReactJS stack with redesigned RESTful JSON endpoints, improving Order Orchestration response times by 15%.
- Shipped real-time notification flows with MySQL triggers and REST APIs validated through unit and integration tests in GIT, cutting processing time by 30% for 10 analysts.

Technical Projects

Supply Chain Analytics Dashboard | React, D3.js, AG-Grid

- Built a React and TypeScript dashboard with AG-Grid virtualized tables and server-side row models, cutting data exploration time by 55% across 50K+ supplier records.
- Implemented interactive D3.js visualizations with drill-down and zoom using CSS responsive design, increasing insight discovery by 40% over static chart baselines.

High-Performance Document Retrieval Engine | React, REST, Docker

- Built a React and TypeScript search UI with debounced input, relevance badges, and optimistic updates, reducing perceived search latency by 45% across 500 queries.
- Engineered a REST API with tuned inverted indexes and field-boosted scoring on Docker-containerized services, achieving sub-200ms retrieval across 10K+ documents.

Skills

Languages: JavaScript/ES6+, TypeScript, PHP 8, Python, SQL, HTML5, CSS3

Frontend: ReactJS, AG-Grid, D3.js, Redux Toolkit, Responsive Design, Tailwind CSS

Backend & APIs: PHP, Node.js, REST APIs, HTTP, JSON, Web Fundamentals

Databases: MySQL, PostgreSQL, MongoDB, Redis

DevOps & Tooling: Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, GIT, Splunk, AWS

Testing: Jest, Supertest, Cypress, React Testing Library, Unit, Integration, End-to-End

Certifications: AWS Cloud Quest: Cloud Practitioner
